VALUEBOX

VALUEBOX

ValueBox for valuables, administration and complete control.

ValueBox Control

New ValueBox Control enables staff and organisations with high volumes of passengers and services to simplify administration and improve security for sensitive or expensive equipment and personal belongings.

ValueBox Control with enhanced security

Do you always have full control of where your company's important and valuable items are? Does your staff have somewhere safe to keep valuable possessions while they are working? Our new, advanced ValueBox Control is the answer to this.

Web-based control from anywhere

Total peace of mind at all times when you store your belongings or valuable equipment. ValueBox Control, connected to the KeyWin6 web-based administration system, gives the right person secure storage of their belongings at all times, with the help of a laptop or tablet.

Simple administration

ValueBox is as easy to use as it is to administer. As a user, you receive a code that you enter when you take out or put in your valuables. The code can apply to one or more compartments, suited to your needs.

Control (C)

Keeping valuables safe

Our latest version of the multi-faceted KeyWin6 security system gives you full control at all times of who is using what in your organisation. The ValueBox storage solutions provides safe storage of small valuable items and expensive equipment.

Highly-versatile web-based administration

When someone needs to borrow equipment for a meeting or conference, the administrator does not need to be there to sign it out. The ValueBox system can be managed from anywhere and any computer or tablet using the KeyWin6 administration tool. Greatest possible security and unparalleled versatility.

High security for valuable objects.

Despite its compact size, the ValueBox's updated design now makes it possible to store bags, laptops, projectors, cameras and other large items with the same high level of security as the company's keys.

Safe storage of lost-and-found items

ValueBox is used to store wallets, watches, computers, bags and other valuable items that are handed in at airports, railway stations and universities.

Safe storage in sensitive zones

ValueBox is used by the military at high-security sites where visitors are required to deposit phones, tablets, cameras and other personal items before entering.

Safe storage in home care services

Mobiles and valuables with a large number of different users can be kept securely and managed simply with ValueBox in the KeyWin6 system.

Demand-driven flexibility.

Space with varying capacity.

ValueBox Control and web-based administration let you connect a large number of storage boxes of different sizes. This enables you to create a compact, secure and space-efficient storage system to suit the needs of your business.

Large compartments

Ideal for storing items at lost-and-found offices at airports and railway stations.

Medium-size compartments

Often suitable for the company's valuable equipment, measuring instruments, projectors, etc.

Small compartments

Excellent for mobile phones, wallets and other personal belongings.

Facts and functions.

Users
- Selected or random PIN code
- Login via PIN code or card reader
- Option to change code at the cabinet
- Deactivation of users
- Validity period for users
- Individual language settings
- User type (dual level authentication)
- Advanced search function.

Event log
- Log from PC and cabinet
- Select what a log displays
- Intelligent search function
- Sort by date or events
- Clear alarm indications
- Reports and PDF documents
- Alarm forwarded to e-mail.

ValueBox
- Display screen with search function
- Service menu for configuration
- Administration code with full authorisation
- Automatic or static IP address
- Door alarm
- Burglar alarm
- Connection for external reader
- Connection for external alarm.

Groups
- Groups for users, keys and compartments
- Time channels
- Simple administration via groups
- Good overview via groups.

Administrators
- Edit administrator permissions
- Selection of cabinet for administration
- Only information about own cabinet
- Activities registered in log.

Compartments
- Colour coding of compartments.

Settings
- Cabinet overview
- Administration overview
- Import users via CSV or XML
- Export users or keys to PDF document
- Number of characters for codes
- Add/remove card reader
- Product information
- E-mail settings for alarm incidents
- Choice of language.

VALUEBOX

Control of valuables.

ValueBox Basic & System

Important and valuable objects can be found in most companies and organisations. Whether it is personal property that needs to be stored during the working day or equipment that is required in the day-to-day work, ValueBox gives you security and control.

Always in safe hands

With our ValueBox, you get total control over important objects, regardless of whether they are valuables, equipment or medicines.

Flexible systems save money

All ValueBoxes are flexible and can be easily adapted to your needs. Start with storage for a few compartments and then expand as needed. Basic and System can be expanded to up to 96 compartments connected to a main cabinet.

Easy to use

ValueBox is as easy to use as it is to administer. As a user, you receive a code that you enter when you take out or put in your valuables. The code can apply to one or more compartments, suited to your needs.

Important things require secure systems.

Many companies and organisations have valuables or objects that require scrupulous control. With ValueBox, you have the possibility to store these in separate compartments and you can decide which members of the staff have access to which compartments. Here are a few examples of valuables that need secure storage.

Medicines

Value boxes are a secure solution for storing prescription medicines, and pharmacies can also put in medicines for customers, who can come in and collect their medicine using a PIN code.

Mobile phone/handbag

Employees in stores often need a secure solution for storing their valuables during the working day. With ValueBox, they get a personal compartment where they can lock their things – simply and reliably.

Technical equipment

Much of the police's most important equipment must be stored according to strict security instructions. This is why they use our value boxes on a daily basis. They provide them with precise control of everything from radios to weapons.

Offices (files, documents, GPS receivers)

Office staff can have their own personal compartment for storing valuables during the working day. Moreover, many offices need secure storage of documents and valuable tools, such as mobile phones or GPS screens.

Mining company (gas alarm)

Many mines keep gas alarms that require safe storage. With ValueBox, the personnel can take a gas alarm down with them for the shift and then return it to safe storage after the end of the shift.

How detailed would you like the information to be?

Keyboard, display unit and PC application.

ValueBox value boxes give you and your personnel easy and secure storage of valuables and important tools. All value boxes are available with 2, 3, 4, 5 or 6 compartments and you can choose between the series Basic (B) and System (S). Basic provides you with a simple and reliable solution while System gives you more options and more control. Our expansion series, Expansion (E), naturally matches both Basic and System, so it is easy for you to expand when you need to.

Basic (B)

The Basic series is based on simplicity and security. All cabinets are equipped with a keypad for entering codes and programming. The green diode above the keypad indicates that the cabinet is active and blinks even faster when it is in service mode.

Basic is available in various models having from 2 to 6 compartments. All cabinets can be expanded using the expansion series, Expansion, by up to 15 cabinets in any combination. In other words, you can have up to 96 compartments in the same system controlled via the main cabinet's keypad.

System (S)

The System series is a flexible and smart solution that offers even more control over your valuables. The keypad comes with a display to provide a good overview and easy programming. The cabinets are designed for up to 500 users (codes with 1-8 characters) and store up to 3,600 events. Just like our more advanced key management systems, you can manage System using our smart KeyWin Light software.

System is also available in various models from 2 to 6 compartments. All cabinets can be expanded using the expansion series, Expansion, by up to 15 cabinets in any combination. In other words, you can have up to 96 compartments in the same system controlled via the main cabinet's keypad.

KeyWin Light

The KeyWin Light software is a simple and easy-to-grasp control system for our key cabinets and value boxes. By plugging in a USB flash memory with a special service code, you download the event log and other information from the cabinet to the computer.

It is easy to add, delete or edit codes and users. You can also search for specific events in the log.

When your needs change.

Easy expansion by up to 15 extra cabinets.

The Expansion series is a series of expansion cabinets that can be combined with the different series based on the need for storage compartments. A main cabinet in the Basic or System series can be expanded by adding up to 15 expansion cabinets. The expansion cabinets are controlled via the keypad on the main cabinet.

One doesn't expect a fashion store like Gina Tricot to need products such as ValueBox. Nevertheless, when there are many employees, there is also a great need to store their valuables securely while they are working.

Find out what Fredrik Eriksson at Gina Tricot has to say at *creone.com*.

Models for Basic, System and Expansion.

Match and adjust to you usage.

The systems can contain everything from a few compartments to up to 96 compartments in the same system. When needed, you can easily add more cabinets to the system.

Up to 15 cabinets can be used in the same system.
