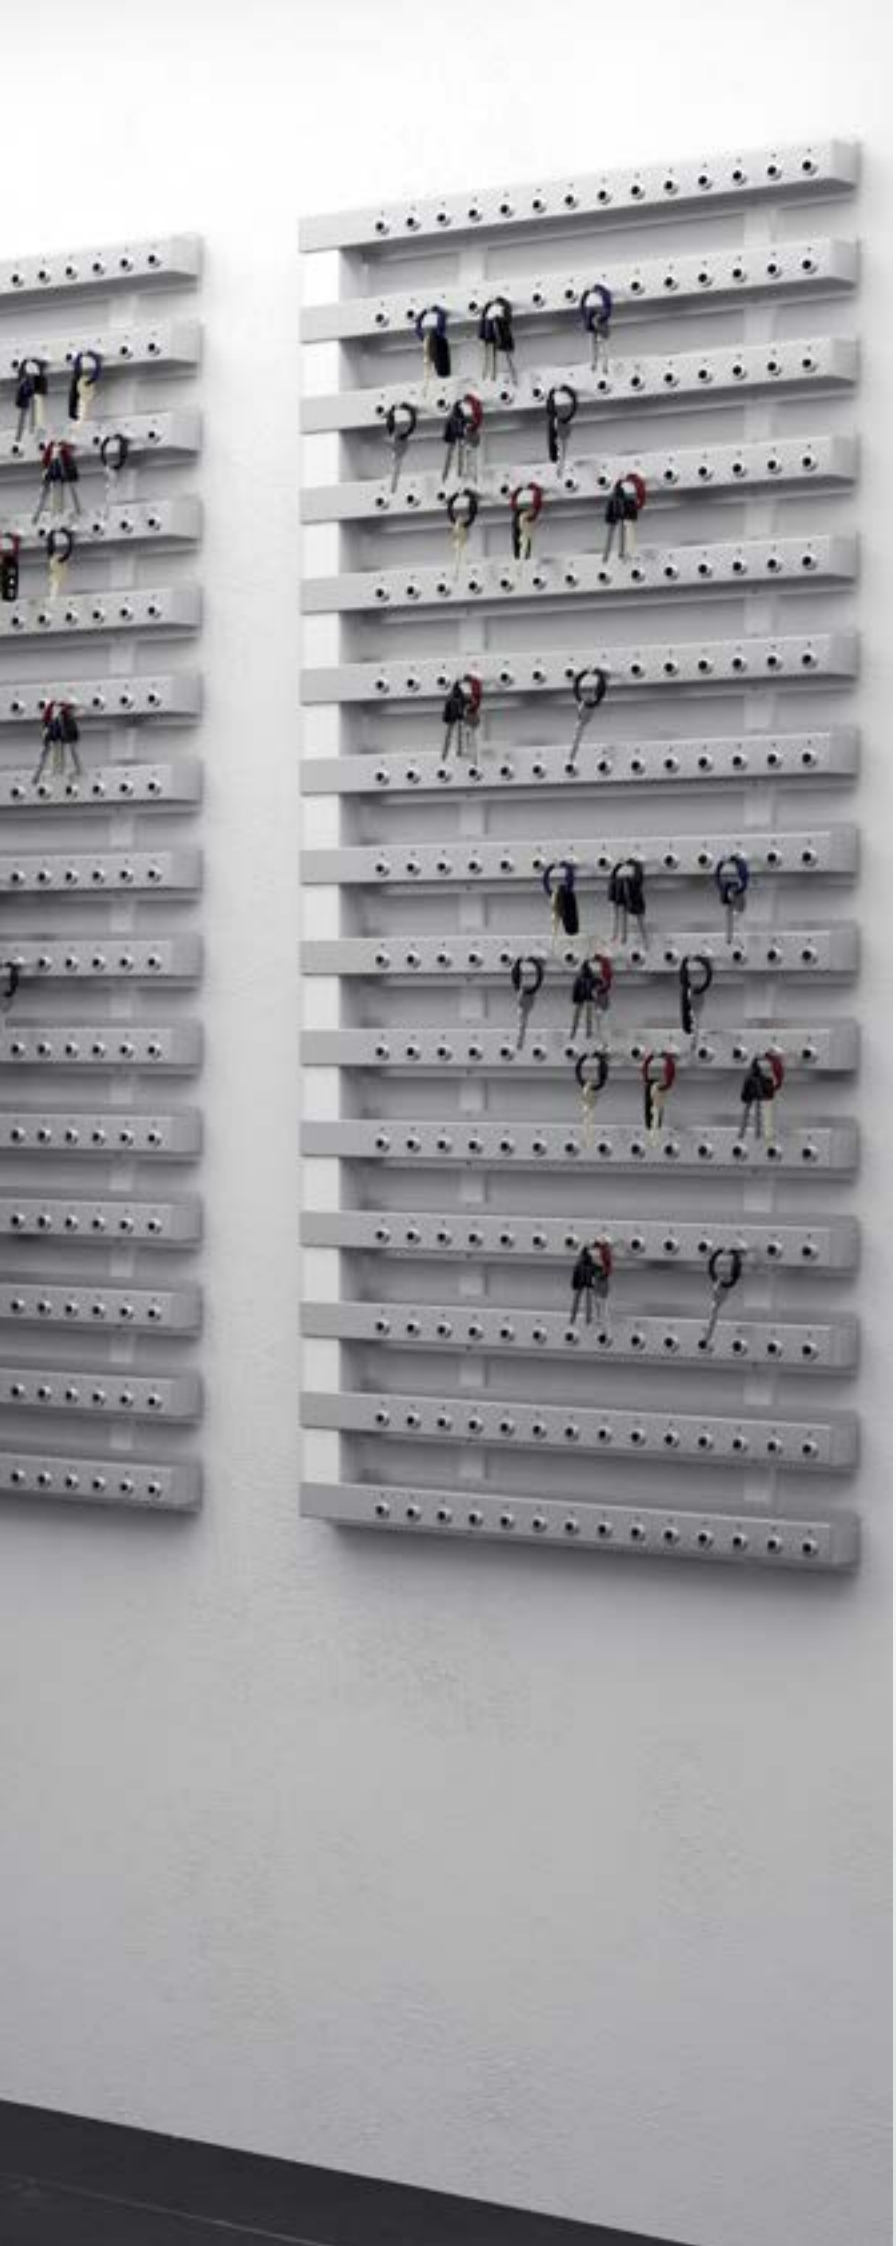
KEYRACK



KEYRACK

Intelligent key strips.

Easily mounted on the wall or
in a security cabinet.

Pair your keys together with the IntelliPin key peg and place them in the KeyRack system's lockable/ non-lockable key strips, directly on the wall or in a cabinet. It couldn't be easier to secure an overview and complete control of your key stock. With KeyRack, you can extend your intelligent key storage to as many as 66 strips with 924 unique key slots per control unit. Get maximum overview by mounting directly on the wall or maximum security by mounting in one or more security cabinets – the choice is yours.

Always in safe hands

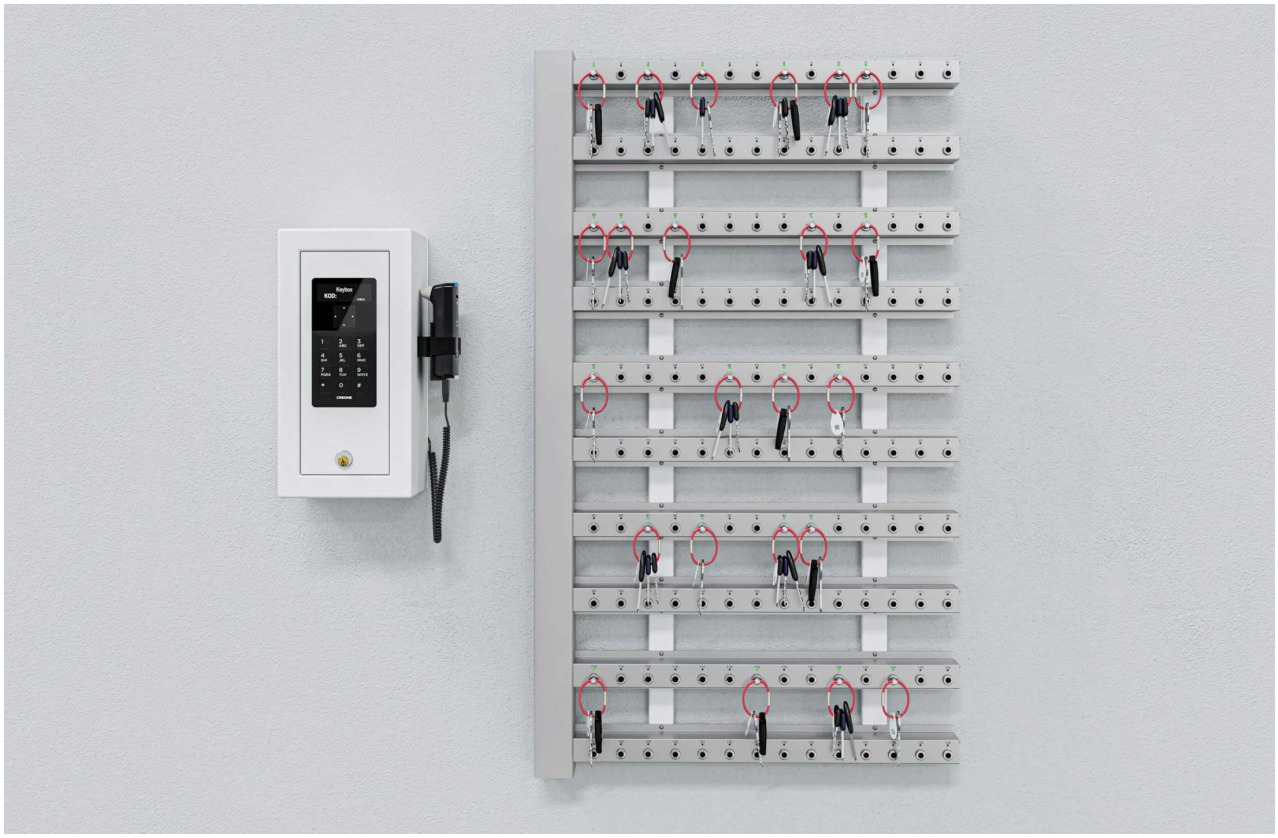
You decide who will have access to a given key and you have full control over when it is taken and returned.

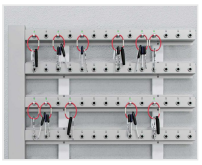
Flexible systems save money

With KeyRack, you can expand your initial choice and gradually increase capacity in line with your changing needs.

There is a solution for everybody

Our range includes products that are suitable for everything from a handful to several hundred key rings.





KEYRACK

Intelligent key strips

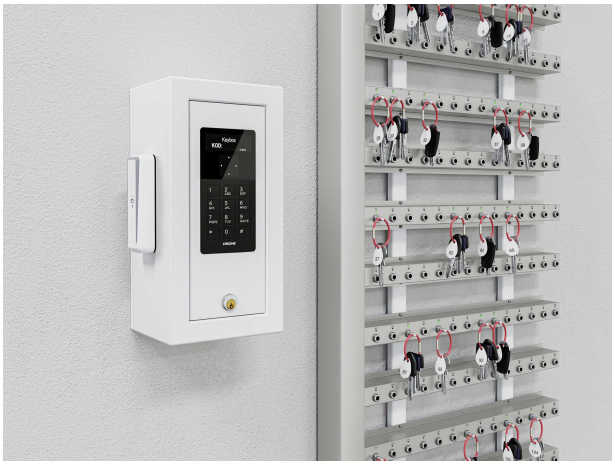
Pair your keys with the IntelliPin key peg and place them in the KeyRack system's lockable/non-lockable key strips, directly on the wall or in a cabinet. It couldn't be easier to secure an overview and complete control of your key stock. With KeyRack you can expand your intelligent key storage up to a maximum of 66 strips with a total of 924 unique key positions per control box connected to KeyWin. Get maximum overview by mounting directly on the wall or maximum security by mounting in one or more security cabinets – the choice is yours.

Mount directly on the wall

With the KeyRack key strip mounted directly on the wall, you obtain a guaranteed overview and fast access to each unique key. You can freely combine lockable/non-lockable strips and easily expand the system to meet your needs.

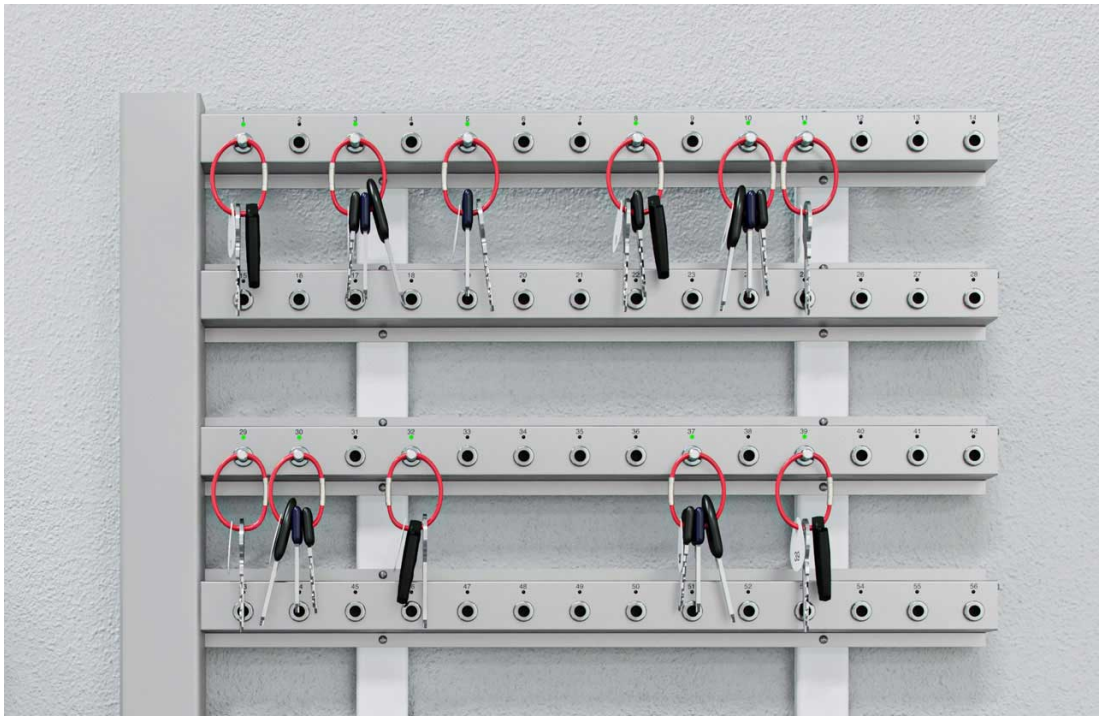
Personal code with display for overview

KeyRack is equipped with a keypad for programming and entering personal codes. A clear display provides an excellent overview and menu navigation. Activate alarms, see who has taken out a specific key, all directly on the display. With battery backup, you never need to worry about access to the cabinet.



Locked & unlocked key positions

The IntelliPin is available in two versions. Non-lockable pegs sound the alarm immediately if a key is removed without it first having been authorised via the KeyWin software. Lockable pegs go a step further and physically lock the key/peg into the strip.



Choose the number of key strips

You can choose between a locked and unlocked key strip, or combine the two - thus starting with a smallerBinvestment that you can expand if needed.

Connect a card reader, RFID or alcohol interlock

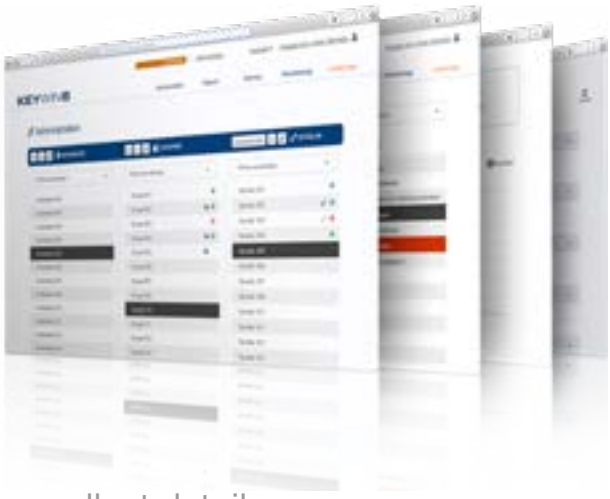
The KeyRack system can easily be connected to an external device such as a card reader, RFID or alcohol interlockBfor added security. Being able to combine an alcohol interlock with our systems means that those under theBinfluence of alcohol cannot access the system and thus cannot get to their keys. This means it is safe to check thatBno one gets behind the wheel while drunk.

A complete range.

An expandable, transparent and lockable comprehensive solution.

Convenient control and overview, directly from your computer

The KeyWin6 software keeps track of every single key via the IntelliPin key peg. Pair the IntelliPin and key together, then place them on the strip on the wall or in a cabinet. Each IntelliPin carries a unique ID, which means you can easily identify the status of individual keys directly from KeyWin6. You can find more information about KeyWin6 on pages 8-11.



Good order down to the smallest detail.

Choose between locked and unlocked key slots for increased security.

Identification

KeyRack recognises and identifies each individual key peg. A LED on the key strip also shows which key(s) are available with a given user's rights.

Intelligent key peg

The IntelliPin key peg itself does not have any intelligence, but the unique identity of each peg makes so many options available.

Lockable/non-lockable peg

The IntelliPin is available in two versions. Non-lockable pegs sound the alarm immediately if a key is removed without it first having been authorised via the KeyWin6 software. Lockable pegs go a step further and physically lock the key/peg into the strip. Both versions guarantee security and provide an overview of your entire key stock and can, moreover, be combined in the same system.
